

<p>+</p> <p>how we worked:</p> <p>Michael made sure all UIs passed WCAG2 responsibilities</p> <p>Andrew implemented the API intergration and fed all respected data into the database</p> <p>Eve made wireframes fro all UIs and made sure there were no security risks</p> <p>Sean implemented unit tests to increase code coverage</p> <p><b>B</b> <i>I</i> <u>U</u> ab ☰ ☑</p>	<p>What worked:</p> <p>We all had well defined tasks for eachother and we also made the web app more accessible to users, we also stored all data fetched from the API into the database</p>	<p>What didnt work:</p> <p>Our time management was not efficient and implementation of non-readable code. We also have a few bugs left in the program which increases security concerns</p>	<p>how we can improve:</p> <p>Implement more readable code, give suitable timeframes for each feature, increase code coverage and increase security for the app.</p>
