

how we worked:

We all implented final testing to increase code coverage and make sure our pipelines passed and made sure all our UIs passed WCAG2 tests as well as making sure our code had no security hotspots or vulnerabilities. We all contributed to the final write up for the Cloud Report and also created a powerpoint for our final presentation

What worked:

We all contributed and knew what tasks to complete. We all assigned eachother parts of the code to test and make sure it was up to par for the final submission

What didnt work:

in this project our time management skills and trying to sort times to meetup with eachother on what needs to be completed.

+

△ ... ×

how we can improve:

In future projects, we will need to improve our communication, our teasm work and make sure we implement more readable code that is modularised for eadier testing
